

OneLP — Venture Capstone

Deliverables Checklist

Mapping to Dae-Jin Lee's requirements (June 2026)

June 2026

Venture Capstone — Deliverables Checklist

This maps every requirement in Prof. Dae-Jin Lee's guidance to a concrete artifact in this repo, with status. **Legend:**  built from repo ·  drafted from repo data, team to validate ·  team to complete (needs external research or a strategic decision).

Required deliverables

Requirement	Artifact	Status
Final presentation / pitch (primary)	slides/OneLP-Venture-Capstone-Pitch.pptx (+ .pdf) — 19 slides, 7-section flow, presenter notes embedded	
Presentation slides	same file; technical-deep-dive backup: slides/OneLP-Capstone-Deliverables.pptx	
Working MVP / prototype	Live deployed platform + seeded demo accounts (Huergo FO, F3 Finance MFO, Atlas MFO). Team: confirm live + record fallback video	
Code repository access	This repository (OneLPMVP) — pipeline src/lib/documents/, forecasting src/lib/forecasting/, evaluation capstone/	
Supporting: technical implementation	capstone/ — 3 evaluation deliverables (reports, notebooks, figures, results)	
Supporting: customer validation	Traction slide + vault/business/	

Requirement	Artifact	Status
	(pilots, deals); team: confirm current pilot list / add LOIs	
Supporting: market research	TAM/SAM/SOM + sourced market evidence	

7-section flow — coverage

#	Section	Slides	Status	Notes
1	Team & problem statement	2–3	 / 	Problem fully built; team: add founder roles/bios
2	Market opportunity & value proposition	4–6	 / 	Value prop + competitive landscape  ; TAM/SAM/SOM 
3	Product & MVP demonstration	7–8		Live-demo script + extraction workflow
4	Technical implementation	9–12		Architecture + ML/DS (extraction, forecasting, calibration), rationale, lessons
5	Business model & go-to-market	13–16	 / 	Pricing, unit econ, financials, traction drafted; scale-up GTM 
6	Future roadmap	17		NOW shipped; team: confirm NEXT/LATE R sequencing & dates
7	Funding requirements & use of funds	18		€300K pre-seed + €750K seed drafted; team:

#	Section	Slides	Status	Notes
				confirm amount/valuation/instrument

What the team still needs to complete (the / items)

1. **Founder roles & one-line bios** (slide 2) — replace placeholders.
2. **TAM / SAM / SOM** (slide 4) — insert figures with one cited source each (Preqin, Campden Wealth, Deloitte family-office reports). The funnel scaffold and methodology are already laid out.
3. **Scale-up GTM** (slide 16) — channels, sales-cycle length & conversion by tier (pull from pilot data), expansion sequence, CAC by channel.
4. **Funding ask confirmation** (slide 18) — confirm the current amount, valuation, and instrument (SAFE / equity). Draft uses the repo's €300K pre-seed + €750K seed scenario.
5. **Validate the  business numbers** (pricing, unit economics, financials, pilots) against the Notion sources of truth before presenting — they are drafted from vault/business/ and may be dated.
6. **MVP demo** — confirm the deployed platform is live, rehearse the 5-step demo flow, and record a fallback screen capture.

Technical contribution — already evaluated (the panel will probe this)

Built and measured against the proposal's quantitative targets:

Metric	Target	Result	Where
Extraction F1 (hybrid)	≥ 0.90 / crit ≥ 0.95	0.968 / 0.968	Deliverable 1
Forecast MAE	$< 15\%$	5.0%	Deliverable 2
End-to-end latency	P50 $< 30s$ / P95 $< 90s$	24s / 29s	Deliverable 3

Full reports: capstone/reports/OneLP-Capstone-POC-Deliverables.pdf. Reproduce everything with `cd capstone && ./build.sh`.
